Started on	Wednesday, 8 April 2026, 12:43 PM
State	Finished
Completed on	Wednesday, 8 April 2026, 12:50 PM
Time taken	6 mins 8 secs
Marks	20.00/20.00
Grade	**100.00** out of 100.00

Question 1

Complete

Mark 1.00 out of 1.00

A REST API should be stateless. What does this imply?

- a. Each request is independent
- b. Server stores session
- c. API has no authentication
- d. API has no database

Question 2

Complete

Mark 1.00 out of 1.00

If embeddings are poorly generated, what is the likely impact?

- a. Slow API
- b. Database crash
- c. Poor retrieval relevance
- d. Increased storage

Question 3

Complete

Mark 1.00 out of 1.00

In a RAG system, what is the primary role of the vector database?

- a. Retrieve relevant context
- b. Train LLM
- c. Generate responses
- d. Store API logs

Question 4

Complete

Mark 1.00 out of 1.00

When using :contentReference[oaicite:1]{index=1}, what is an "index"?

- a. File storage
- b. SQL table
- c. Collection of vectors optimized for search
- d. API endpoint

Question 5

Complete

Mark 1.00 out of 1.00

Which distance metric is commonly used in vector search?

- a. Binary search
- b. Hashing
- c. Euclidean or Cosine similarity
- d. Manhattan distance

Question 6

Complete

Mark 1.00 out of 1.00

Which header is commonly used to send authentication token?

- a. Content-Type
- b. Authorization
- c. Accept
- d. Cache-Control

Question 7

Complete

Mark 1.00 out of 1.00

Which HTTP method is idempotent and used for updating resources?

- a. PUT
- b. POST
- c. PATCH
- d. CONNECT

Question 8

Complete

Mark 1.00 out of 1.00

Which HTTP method should be used to create a new resource in REST API?

- a. GET
- b. PUT
- c. DELETE
- d. POST

Question 9

Complete

Mark 1.00 out of 1.00

Which HTTP status code indicates successful resource creation?

- a. 200
- b. 204
- c. 201
- d. 404

Question 10

Complete

Mark 1.00 out of 1.00

Which is a key difference between traditional DB and vector DB?

- a. Vector DB uses SQL only
- b. Vector DB supports similarity search instead of exact match
- c. Vector DB stores only images
- d. Vector DB cannot store metadata

Question 11

Complete

Mark 1.00 out of 1.00

Which scenario best fits vector database usage?

- a. Semantic document search
- b. Banking transactions
- c. Logging system
- d. Inventory storage

Question 12

Complete

Mark 1.00 out of 1.00

Why is indexing important in vector databases?

- a. Improves accuracy of model
- b. Reduces storage
- c. Encrypts data
- d. Improves query speed

Question 13

Complete

Mark 1.00 out of 1.00

You are building a semantic search system using embeddings. Why is a vector database preferred over a relational database?

- a. It supports SQL queries
- b. It stores larger files
- c. It enables similarity search using embeddings
- d. It is faster for joins

Question 14

Complete

Mark 1.00 out of 1.00

You are designing an API endpoint to fetch user data. Which is RESTful?

- a. /getUserData
- b. /apiCallUser
- c. /users/{id}
- d. /fetch_user

Question 15

Complete

Mark 1.00 out of 1.00

You are integrating Pinecone with an API. What is the correct workflow?

- a. API → Logging → Model
- b. Vector DB → Model → API
- c. Model → API → Vector DB → Retrieval
- d. API → Model → Database

Question 16

Complete

Mark 1.00 out of 1.00

You design an API where repeated requests should not create duplicate entries. Which concept is important?

- a. Caching
- b. Serialization
- c. Idempotency
- d. Pagination

Question 17

Complete

Mark 1.00 out of 1.00

You insert embeddings into Pinecone. What additional metadata is typically stored?

- a. API keys
- b. Logs
- c. Raw documents or IDs
- d. SQL queries

Question 18

Complete

Mark 1.00 out of 1.00

You send a GET request but server modifies data. What principle is violated?

- a. Idempotency
- b. Statelessness
- c. Safety of GET request
- d. Authentication

Question 19

Complete

Mark 1.00 out of 1.00

You store embeddings in a vector database. What operation is most critical during retrieval?

- a. Sorting
- b. Similarity search
- c. Indexing tables
- d. Aggregation

Question 20

Complete

Mark 1.00 out of 1.00

You want to filter results based on metadata (e.g., category="science"). What feature is required?

- a. Sorting algorithm
- b. SQL join
- c. Index rebuild
- d. Metadata filtering
